

## The leading professional-grade PHP development environment

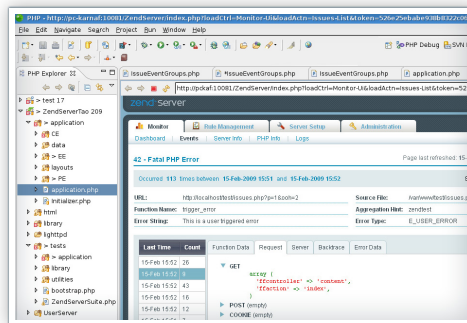

## Support for Agile Development

The PHP Company

## Find and Debug Problems

Easily detect and pinpoint problems during development, testing, and after the application is deployed to the production environment:

- View code tracing information captured by Zend Server in the test or production environment within the Zend Studio user interface
- Debug both the JavaScript front-end and the PHP back-end of a rich Internet application in one session
- Debug and profile your application locally or on the server
- Leverage advanced debugging features such as conditional breakpoints, stack trace view
- Profile your application's web page execution using an integrated Request Monitor
- Analyze web pages using various views for CSS, DOM source, DOM event view and JavaScript
- Debug your application in an embedded browser, which supports HTML5

## Zend Developer Solution

Create better-quality PHP applications faster with Zend Developer Solution, a combination of Zend's leading PHP products and professional consulting:

- **Zend Server** - A complete PHP application stack that also includes performance enhancements, application monitoring, problem diagnostics, technical support and updates
- **Zend Studio** - The leading professional-grade PHP development environment
- **Technical Support & Consulting by Zend's PHP experts**

## Extend and Customize Your Environment

Zend Studio is based on PHP Development Tools (PDT) for Eclipse, a widely popular open source project led by Zend. This not only ensures a highly reliable and standardized development environment, but also enables you to use more than 1,000 Eclipse plug-ins, such as Mylyn for Application Lifecycle Management, JSON Editor and Adobe Flash Builder. The open Eclipse architecture allows you to extend your environment to suit any of your development or testing needs.

## A Complete Development and Runtime Solution

Together with Zend Server and Zend Framework, Zend Studio provides a complete solution for the entire application lifecycle:

- Set up a complete development and runtime environment in minutes with Zend Studio and Zend Server integration
- Jump-start your web application development and boost productivity with Zend Framework integration
- Test and stage your application on Zend Server using a consistent runtime environment at all stages
- Detect and debug problems in the test lab or in the production environment with Zend Studio and Zend Server integration
- Develop and debug PHP and Ajax applications using one IDE

## System Requirements

### Supported Operating Systems

- Windows x86, x86-64 XP, Vista, Windows 7
- Linux x86, x86-64
- Mac OSX 10.5, 10.6

### PHP Compatibility

- 4.2.x, 4.3.x, 4.4.x, 5.0.x, 5.1.x, 5.2.x, 5.3.x

### Zend Server Support

- Zend Server 4.x, 5.x

### Supported Web Servers

- Apache 1.3.x, 2.0.x Apache 2.2.x
- IIS 5, 6, 7
